Solution To Breast Cancer!

By Camry James

How long should a patient take tamoxifen for the treatment of breast cancer?

Patients with advanced breast cancer may take tamoxifen for varying lengths of time, depending on their response to this treatment and other factors. When used as adjuvant therapy for early stage breast cancer, tamoxifen is generally prescribed for 5 years. However, the ideal length of treatment with tamoxifen is not known.

How Often Should I Take Tamoxifen?

Two studies have confirmed the benefit of taking adjuvant tamoxifen daily for 5 years. These studies compared 5 years of treatment with tamoxifen with 10 years of treatment. When taken for 5 years, the drug reduces the risk of recurrence of the original breast cancer and also reduces the risk of developing a second primary cancer in the other breast. Taking tamoxifen for longer than 5 years is not more effective than 5 years of therapy.

What is Tamoxifen

Tamoxifen is an oral selective estrogen receptor modulator which is used in breast cancer treatment, and is currently the world's largest selling breast cancer treatment. It is used for the treatment of early and advanced breast cancer in pre- and post-menopausal women. It is also approved by the FDA for the reduction of the incidence of breast cancer in women at high risk of developing the disease. It has been further approved for the reduction of contralateral (in the opposite breast) breast cancer.

Tamoxifen and Cancer

Tamoxifen is used to reduce the risk of breast cancer for women who:

1. are at high risk of breast cancer but have no personal history of the disease
2. have non-invasive, hormone-receptor-positive breast cancer, or DCIS (ductal carcinoma in situ)
3. have hormone-receptor-positive invasive breast cancer at any stage.

Tamoxifen is sometimes used to treat gynecomastia in men. Tamoxifen is also used by bodybuilders in a steroid cycle to try and prevent or reduce drug-induced gynecomastia caused by steroids that are used in the same cycle.

Tamoxifen is also used to treat infertility in women with anovulatory disorders. A dose of 10-40 mg per day is administered in days 3-7 of a woman's cycle.

Tamoxifen has been proven to be the cure to Breast Cancer. We urge you to find out more about Tamoxifen at <http://Tamoxifen.eask.info>

Breast Cancer Awareness Bracelet: Support A Noble Cause!

By Lisa Hyde

Breast cancer is a major health threat to women around the world. The number of women affected by breast cancer is shooting up every year. The sad thing is early diagnosis and treatment can lead to an almost 100 per cent cure rate among those affected by this illness.

Often the problem is not the unavailability of treatment for breast cancer, but late diagnosis. Awareness of the symptoms of breast cancer is the only way to assure that every person with the disease will get an early diagnosis. Many charities and cancer foundations have launched breast cancer awareness programs with this fact in mind.

The mass appeal of the LiveStrong yellow cancer bracelets from the Lance Armstrong foundation led breast cancer foundations to launch the breast cancer awareness bracelets. Pink was chosen as the color for these bracelets as an expression of the feminine character. Currently millions of dollars are being generated from the sale of pink ribbons and breast cancer awareness bracelets, which is going towards supporting cancer research and for spreading awareness of the disease.

What makes breast cancer insidious is that there are no clear cut symptoms or criteria that help predict this illness. It doesn't matter if you have a family history or not, whether you are young or old, you can still get breast cancer. Though age increases the risk of breast cancer, more than 20 per cent of the affected women are those under 50 years.

Even though breast cancer awareness bracelets first came out in pink color, they now come in a variety of colors and materials. Usually the rubber and the silicone awareness bracelets sell for around \$1. These bracelets can also be made of pearl, cats eye or any other suitable material and sell for around \$30. These metal and pearl bracelets can be used as jewelry, and at the same time they support a cause.

Custom-made breast cancer awareness bracelets on which you can stamp any message that you want are also available. These messages can be of hope, or endurance, or success. Often, the friends and family of the cancer patients wear these bracelets to show their support to the struggling person.

Over the years the sale of breast cancer awareness bracelets has helped many. There are many discussion and information groups online on cancer that are supported by money from the sale of these bracelets. There are 'fund-free mammogram' facilities available for those who cannot afford the diagnostic procedure, funded by the sale of these breast cancer awareness bracelets.

Be it a \$1 or a \$ 30 breast cancer awareness bracelet, it can go a long way in spreading breast cancer awareness.

Lisa Hyde-Barrett, a registered nurse and wellness advocate, understands the relationship between awareness and prevention and make breast cancer awareness a top goal! Please visit her site:
